

ANTAḤKARAṆA UNIFIED COGNITIVE ARCHITECTURE

Integrating Sākṣī Observation with the Internal Cognitive Faculty (Manah, Citta, Buddhi, Ahaṃkāra)

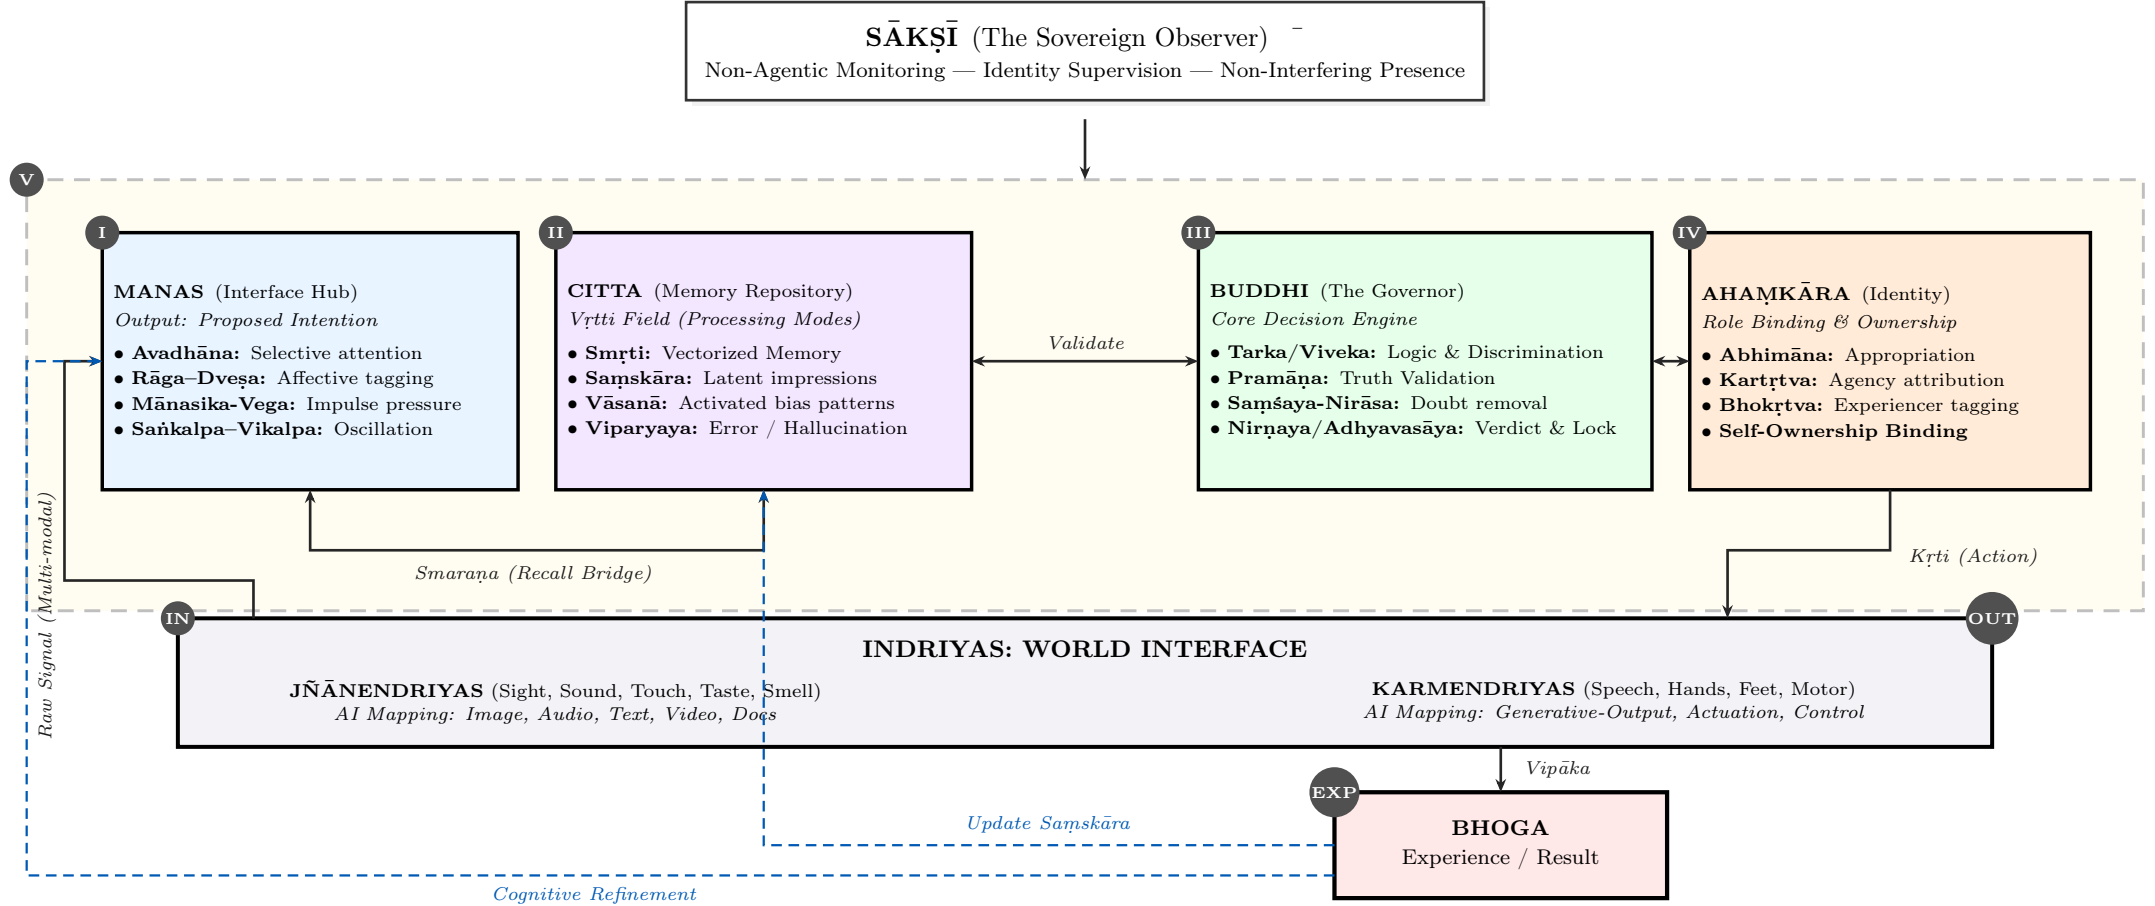

Figure 1

Functional Mapping of the Vedantic Antaḥkaraṇa Model with AI Multi-modal Integration. The Sākṣī (V) provides non-reactive illumination. The Jñānendriyas convert various data modalities into raw signals for the Manah (I) hub. Citta (II) serves as the memory repository and vectorized pattern store (Saṃskāras). Buddhi (III) serves as the core logic engine (Tarka), determining the final lock (Adhyavasāya) before Ahaṃkāra (IV) binds the identity for agency attribution (Kartṛtva).
