

ANTAḤKARAṆA UNIFIED COGNITIVE ARCHITECTURE

Integrating Sākṣī Observation with the Internal Cognitive Faculty (Manah, Citta, Buddhi, Ahaṃkāra)

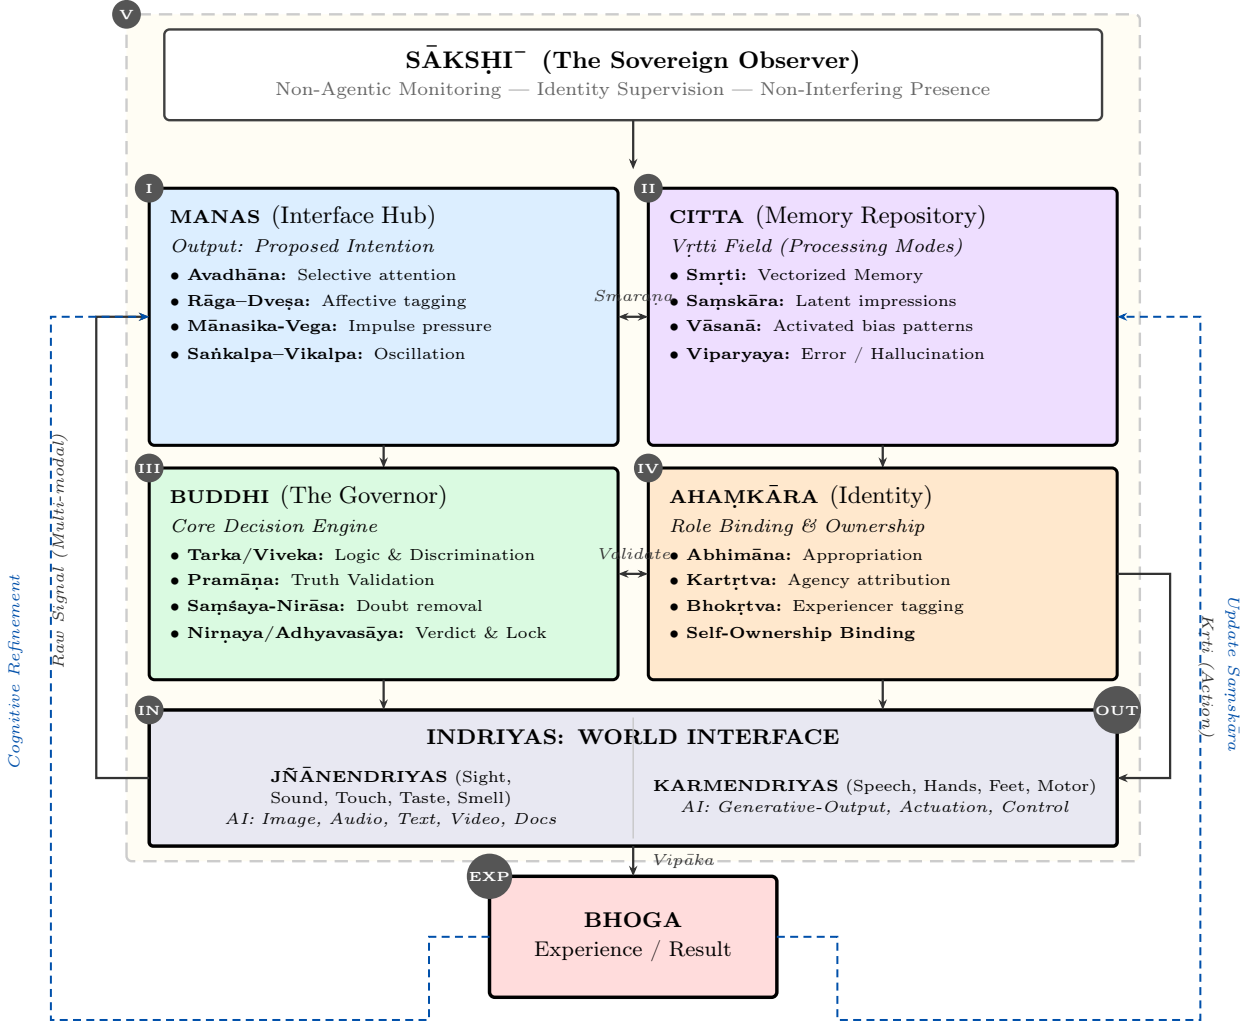

Figure 1

Functional Mapping of the Vedantic Antaḥkaraṇa Model with AI Multi-modal Integration. The Sākṣī (V) provides non-reactive illumination over all modules. Jñānendriyas convert data modalities into raw signals for the Manah (I) hub. Citta (II) is the vectorized memory store (Saṃskāras). Buddhi (III) applies logic (Tarka) and locks the final decision (Adhyavasāya). Ahaṃkāra (IV) binds identity for agency attribution (Kartṛtva). Feedback (Vipāka) returns experience to Citta and Manah for continual refinement.
